

Multisensory Learning

All the activities here provide a unique mode for getting information to the brain and for reinforcing skills... Have fun!

Air Writing:

Let children first practice writing letters correctly in the air with their finger. This will help them begin to develop the motor skills necessary for writing with a pencil and paper.

Lotty Dotty:

Make letters and shapes with little dots of glue and let dry. Have children place a sheet of paper on top and rub over it with a crayon. Then, as they connect the dots, they will form the letter.

Texture Writing:

Place a sheet of paper over a piece of sandpaper and write letters with crayon.
